

Project Design Phase-II
Functional Requirements

Date	17/10/2022
Team ID	PNT2022TMID38300
Project Name	Emerging methods for early detection of forest fire
Team Leader Team Members	Saranya P Shruthi P Priyadharshini R Krishnaveni R

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Video surveillance start	Start surveillance through remote control
FR-2	Forest monitoring	Continuous monitoring through camera
FR-3	Detect fire	Fire is detected through CNN model
FR-4	Alert	Alert the forest officials through message

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Monitoring of the potential risk areas and an early detection of fire can significantly shorten the reaction time and also reduce the potential damage as well as the cost of fire fighting.
NFR-2	Security	More secure environment
NFR-3	Reliability	Model is safe to install
NFR-4	Performance	Model will achieve high accuracy
NFR-5	Availability	Build model is available all the time
NFR-6	Scalability	The current requirement for a cargo compartment detection system is that a fire has to be detected in 1 minute, and in that time be so small that the fire is not a significant hazard to the airplane. Nuisance alarms also plague the industry, with upwards of 90% of fire alarms being false warnings
